FOR IMMEDIATE RELEASE

Douglas Lighting Controls® Introduces Tunable White Lighting Control Solution

VANCOUVER, British Columbia. (October 31, 2019) – Douglas Lighting Controls®, a member of the Panasonic family of companies, recently introduced Tunable White Lighting control solutions to their high-performance Dialog® networked lighting controls. Designed for human-centric lighting applications, the system offers compatibility with dual-channel 0-10V Tunable-White fixtures, allowing users to control the fixtures manually or through a programmed schedule.

“At Douglas, we are dedicated to creating efficient solutions that promote ease of use, reduce energy consumption and create a better end-user experience,” said Tony Lee, Product Manager for Douglas Lighting Controls. “The Tunable White Lighting control solution offers simple human-centric lighting control. This allows our clients to create light-level scenes or schedule specific intensity and Correlated Color Temperature (CCT) levels to optimize lighting for specific work environments.”

Tunable White fixtures and circadian rhythm programming are becoming common in hospital patient rooms and school classrooms. This capability matches the lighting levels with the body’s natural circadian rhythm to promote healing and create better learning environments. The Dialog controller can be programmed to simulate circadian rhythm by utilizing its internal timer and sequencing.

The Dialog system offers advanced digital lighting control solutions by connecting and controlling lights with relays, occupancy sensors, photo sensors, ballasts and/or drivers, and switch stations, and manages facility lighting requirements globally by area or by room. The flexibility and true scalability of the Dialog system allows it to be used in a variety of applications from small commercial buildings to large facilities.

About Douglas Lighting Controls

Douglas Lighting Controls, a member of the Panasonic group and a subsidiary of Panasonic Lighting Americas Inc., engineers, manufactures and markets digital lighting controls for commercial buildings, campuses, parking garages and sports complexes across North America. Douglas systems include networked and stand-alone solutions using wired and wireless technology to optimize lighting for building code compliance, energy efficiency, ease-of-use and comfort. With over 50 years of experience, the company is recognized for its expertise in lighting control systems paired with the precise facility solution.
